

Orthopaedic Surgery and Traumatology

Orthopaedic Surgery and Traumatology

Offering a high-quality health service is the primary objective of the Traumatology and orthopaedic Surgery Unit of the Quirónsalud Marbella Hospital. Patients can access the most advanced treatments, the latest medical technology and a humane approach, where special importance is given to the doctor-patient relationship.

Currently, the team is made up of 16 specialist doctors (traumatologists and physiotherapists) who work in a coordinated manner so as to provide a multidisciplinary medical approach to the diagnostic and therapeutic needs of any pathology of the musculoskeletal system.

All the pathologies of the musculoskeletal system are treated in upper limbs specialist units. We perform MIS (Minimal Incision Surgery), a surgical method that allows us to perform surgery applying minimal incisions.

Specialist units:

- Upper Limb Multidisciplinary Unit
- Lower Limb Multidisciplinary Unit
- Spine Multidisciplinary Unit
- Diagnostic and Therapeutic Multidisciplinary Musculoskeletal Pathology Unit
- Paediatric Rehabilitation and Orthopaedic Multidisciplinary Unit

Dr Rodríguez Argáiz

Head of the Orthopaedic Surgery and Traumatology Unit

Languages:

Spanish, English.

Specialist Doctor in Orthopaedic Surgery and Traumatology with over 30 years' professional experience. Dr Francisco Rodríguez Argáiz is a member of the Spanish Orthopaedic Surgery and Traumatology Society and the Spanish Arthroscopy Society.

He is an expert in the conditions affecting the knee, and has consolidated his professional career in national and international centres specialising in the minimally-invasive surgical treatment of knee conditions.

Dr Francisco Rodríguez Argáiz is a regular participant at national and international scientific events and the author of numerous scientific reports in the field of Traumatology. And he is a regular speaker at congresses, especially with a focus on arthroscopic surgery of the anterior cruciate ligament and the replacement of the knee joint.
